PURPOSE

*Administrative Policies are intended to provide further information about the administration of **standard** Cigna benefit plans. In the event of a conflict, a customer’s benefit plan document **always supersedes** the information in an Administrative Policy. Coverage determinations require consideration of 1) the terms of the applicable benefit plan document; 2) any applicable laws/regulations; 3) any relevant collateral source materials including Administrative Policies and; 4) the specific facts of the particular situation. Administrative Policies relate exclusively to the administration of health benefit plans. Administrative Policies are not recommendations for treatment and should never be used as treatment guidelines.*

Administrative Policy

The Affordable Care Act (ACA) requires individual and group health plans to cover in-network preventive services and immunizations without cost sharing (e.g., deductibles, coinsurance, copayments) unless the plan qualifies under the grandfather provision or for an exemption. Coverage for preventive care services other than those mandated by ACA is dependent on benefit plan language. For example, many benefit plans specifically exclude immunizations that are for the purpose of travel or to protect against occupational hazards and risks. Please refer to the applicable benefit plan language to determine benefit availability and the terms, conditions and limitations of coverage.

Preventive care services are covered as required by the Affordable Care Act (ACA). The ACA designated resources that identify the preventive services required for coverage are:

- United States Preventive Services Task Force (USPSTF) grade A or B recommendations

- Advisory Committee on Immunization Practices (ACIP) recommendations adopted by the Director of the Center for Disease Control and Prevention (CDC)
- Health Resources and Services Administration (HRSA) supported comprehensive guidelines which appear in any of the following sources:
 - Periodicity schedule of the Bright Futures Recommendations for Pediatric Preventive Health Care
 - Uniform Panel of the Secretary’s Advisory Committee on Heritable Disorders in Newborns and Children
 - HRSA Women’s Preventive Services Guidelines

Services not covered as preventive care services may be covered under another portion of the benefit plan.

Preventive care services submitted with diagnosis codes that represent treatment of illness or injury will be reviewed as applicable under the medical benefit rather than as a preventive care service.

Additional Preventive Care Services

In addition to the designated services identified by ACA sources, adult wellness examinations, prostate cancer screening, double contrast barium enema for colorectal cancer screening and venipuncture associated with preventive laboratory screenings are covered under the benefit as preventive care services. Professional society statements and guidelines may vary and are not considered part of ACA sources.

Reasonable Medical Management

The ACA states reasonable medical management techniques may be used to determine coverage limitations if a recommendation or guideline does not specify the frequency, method, treatment, or setting for the provision of a recommended preventive service. Reasonable medical management techniques may include precertification, concurrent review, claim review, or similar practices to determine coverage limitations under the plan. These established reasonable medical management techniques and practices may be utilized to determine frequency, method, treatment or setting for the provision of a recommended preventive service.

Please see Coding Table for Coding Information Related to Preventive Services.

Note: ALL ICD-10, CPT® and HCPCS codes billed for a preventive service should follow standard coding guidelines, including those related to an unacceptable primary and principal diagnosis.

Health Equity Considerations

Health equity is the highest level of health for all people; health inequity is the avoidable difference in health status or distribution of health resources due to the social conditions in which people are born, grow, live, work, and age.

Social determinants of health are the conditions in the environment that affect a wide range of health, functioning, and quality of life outcomes and risks. Examples include safe housing, transportation, and neighborhoods; racism, discrimination and violence; education, job opportunities and income; access to nutritious foods and physical activity opportunities; access to clean air and water; and language and literacy skills.

Health disparities exist in many conditions for which preventive care is recommended. Systematic evidence reviews currently commissioned by the USPSTF as part of the recommendation development process consider whether the prevalence of a condition is higher or outcomes are worse in certain populations.

With the requirement by the Affordable Care Act (ACA) that preventive services be provided without cost share, access to services designated as preventive may be enhanced.

General Background

Preventive care services are those screenings, tests, and services that are performed for symptom-free or disease-free individuals. They may also include routine immunization and wellness screening services for symptom-free or disease-free individuals at increased risk for a particular disease.

Screening exams are performed in individuals who are symptom and disease free. Diagnostic tests are performed to evaluate abnormalities (e.g., lab results, physical findings or symptoms). Monitoring or surveillance testing is performed in individuals who have a known condition or history that increases the risk of disease and is no longer considered a screening exam.

A positive result on a preventive screening exam does not alter its classification as a preventive service but does influence how that service is classified when rendered in the future. For example, if a screening colonoscopy performed on an asymptomatic individual without additional risk factors for colorectal cancer (e.g. adenomatous polyps, inflammatory bowel disease) detects colorectal cancer or polyps, the purpose of the procedure remains screening, even if polyps are removed during the preventive screening. However, once a diagnosis of colorectal cancer or additional risk factors for colorectal cancer are identified, future colonoscopies will no longer be considered preventive screening. Positive results on stool-based screening tests and abnormal findings identified by flexible sigmoidoscopy or CT colonography require follow-up with colonoscopy for screening benefits to be achieved (USPSTF, 2021).

Typically, preventive care services must be provided by in-network health care professionals. Ancillary services directly related to a screening colonoscopy or female sterilization procedures are considered part of the preventive service. This includes a pre-procedure evaluation office visit, the facility fee, anesthesia services, and pathology services.

ACA has designated specific resources for coverage by the Act: which include the evidenced-based items or services that have a rating of "A" or "B" in the current recommendations of the USPSTF; immunizations for routine use in children, adolescents, and adults that have a recommendation from the ACIP of the CDC; for infants, children, and adolescents, the evidence-informed preventive care and screenings provided for in the comprehensive guidelines supported by the HRSA; and with respect to women, evidence-informed preventive care and screening provided for in comprehensive guidelines supported by HRSA. If a recommendation or guideline does not specify the frequency, method, treatment, or setting for the provision of that service, reasonable medical management techniques may be used to determine any coverage limitations. Professional society statements and guidelines may vary and are not considered part of ACA sources.

According to the ACA, coverage of preventive services become effective upon a plan's start or anniversary date that is one year after the date the recommendation or guideline is issued. The USPSTF assigns each recommendation a letter grade based on the strength of the evidence and the balance of benefits and harms of a preventive service. If a Grade A or B recommendation changes to a Grade C or I, coverage must be provided through the last day of the plan year. If a

Grade A or B recommendation changes to a Grade D, or any previously recommended service is subject to a safety recall or is otherwise determined to pose a significant safety concern, there is no requirement to provide coverage through the last day of the plan year.

U.S. Preventive Services Task Force Letter Grade Descriptions	
Grade A	The USPSTF recommends the service. There is high certainty that the net benefit is substantial.
Grade B	The USPSTF recommends the service. There is high certainty that the net benefit is moderate or there is moderate certainty that the net benefit is moderate to substantial.
Grade C	The USPSTF recommends selectively offering or providing this service to individual patients based on professional judgment and patient preferences. There is at least moderate certainty that the net benefit is small.
Grade D	The USPSTF recommends against the service. There is moderate or high certainty that the service has no net benefit or that the harms outweigh the benefits.
Grade I	The USPSTF concludes that the current evidence is insufficient to assess the balance of benefits and harms of the service. Evidence is lacking, of poor quality, or conflicting, and the balance of benefits and harms cannot be determined.

Reasonable Medical Management

The ACA states reasonable medical management techniques may be used to determine coverage limitations if a recommendation or guideline does not specify the frequency, method, treatment, or setting for the provision of a recommended preventive service. Reasonable medical management techniques may include precertification, concurrent review, claim review, or similar practices to determine coverage limitations under the plan. These established reasonable medical management techniques and practices may be utilized to determine frequency, method, treatment or setting for the provision of a recommended preventive service.

Reporting Preventive Care Services

ALL ICD-10, CPT® and HCPCS codes billed for a preventive service should follow standard coding guidelines, including those related to an unacceptable primary and principal diagnosis. Preventive care services are reported with diagnosis and procedure codes which identify the services as preventive and not for treatment of injury or illness. (Reference chart below). Age or frequency limits are utilized for certain designated services (i.e., wellness exams, vision and hearing screening, services related to prevention of falls, nutritional and genetic counseling). Preventive care services submitted with diagnosis codes that represent treatment of illness or injury will be paid as applicable under normal medical benefits rather than preventive care coverage.

Modifier 33

Cigna does not process preventive care claims solely based on the presence of modifier 33, which was developed by the industry in response to the ACA’s preventive service requirements. Preventive care services are dependent upon claim submission using preventive diagnosis and procedure codes in order to be identified and covered as preventive care services.

Additional Preventive Care Services

In addition to the designated services identified by ACA sources, adult wellness examinations, prostate cancer screening, double contrast barium enema for colorectal cancer screening, and venipuncture associated with preventive laboratory screenings are covered under the benefit as preventive care services. Professional society statements and guidelines may vary and are not considered part of ACA sources.

Coding Information

Notes:

1. This list of codes may not be all-inclusive since the American Medical Association (AMA) and Centers for Medicare and Medicaid Services (CMS) code updates may occur more frequently than policy updates.
2. Deleted codes and codes which are not effective at the time the service is rendered may not be eligible for reimbursement.
